DETAILED ACTION

Allowable Subject Matter

Claims 1-20 are allowed.

The following is an examiner's statement of reasons for allowance: Claims 1, 12 and 18 contain allowable subject matter for at least the reason that the prior art of record fails to teach or reasonably suggest an x-ray generating assembly or method of positioning an x-ray source assembly comprising a source assembly mounted to a mounting element, a support assembly, a motor element, a gear assembly, an output shaft and an electromechanical lock that rotates in concert with the mounting element such that the mounting element is free to rotate about the output shaft to any relative rotational position when the electromechanical lock is in a disengaged position and the electromechanical lock can engage in the relative rotational position as claimed.

While Sell teaches an electromechanical lock, Sell is unable to lock in any relative rotational position as claimed. Sell requires structures in addition to a lock, which consequently restrict the range of rotational motion. Simmons (US 6,880,691) teaches away from the removal of additional structures by showing the need for a structural clutch to stabilize movable components. Shao (US 6,928,142) also suggests electromechanical locks for movement of a source (Column 7, lines 17-36), though Shao does not teach means for rotation to any relative position.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
